

FEATURE AUDIT, MODULE CATALOG & BUILD ORDER

A 3-phase development plan, followed by the evidence behind it:

Part A is what the tool actually does today, verified against the running code. Part B is every module behind the plan, with its features spelled out.

● Working ● Partially working — has a real gap ● Broken — errors today ● Not built

How this was made: read directly from the application code and confirmed by exercising each page and form, not from a feature list or the demo dashboard. Where something looks like a feature but doesn't work, it's marked broken rather than left off the list.

27

Features working

3

Partially working

2

Broken today

22

Not built

BUILD ORDER — THREE PHASES

Every module from the catalog below, grouped into a build order. Phase 1 is deliberately lean: fix what's broken, make the tax and numbering legally correct, add access control, and give the client basic workforce/expense tracking and a real dashboard — enough to run the whole business on, safely, before anything else is added.

1 FOUNDATION

11 modules + 2 bug fixes

Makes the tool safe, legally correct, and ready for full company rollout — this is the release your client actually starts running the business on.

Access & Trust	Roles & Permissions, Audit Log
Cash Flow	Receivables / Aging Dashboard
Tax & Compliance	Pan-India GST Engine, FY Document Numbering
Workforce & Payroll	Worker / Employee Master, Daily Attendance
In-House Expenses	Daily Expense Entry
Reporting	Owner Dashboard, Real Numbers
System Administration	Company Profile & Branding, Backup & Data Safety
Bug fixes	CO2 Laser Quotation route (currently unreachable), the 7 broken “Add [Component]” forms in machine configuration

2 FULL OPERATIONAL VALUE

27 modules

Everything that makes the software earn its keep day to day — sales completeness, compliance automation, after-sales revenue protection, and payroll.

Sales & CRM	WhatsApp / Email Send, Dealer / Agent + Commission
Cash Flow	Milestone / Advance Payments
Tax & Compliance	e-Way Bill Generation, GSTR-1 Export, Credit / Debit Notes, Tally Ledger Export
Dispatch & Logistics	Packing & Dispatch Note, Installation Scheduling & Report
After The Sale	Machine Serial Number Master, AMC Contract Tracking, Service Ticket System
Pricing & Costing	Component Rate Master, Machine Costing Sheet
Procurement	Supplier Master, PO → Receipt → Bill Match
Job Work Management	Job Work Orders (Outgoing), Job Work Delivery Challan, Job Worker Master
Workforce & Payroll	Salary & Payroll Processing, Salary Slips
In-House Expenses	Expense Categories & Reports
Banking & Cheques	Bank & UPI Register, Post-Dated Cheque Tracking
Assets & Statutory Compliance	Statutory Compliance Calendar
Quality & Documentation	Pre-Dispatch QC Checklist
Automation	Notification Engine

3 DEPTH & POLISH

22 modules

The refinement layer — deeper reporting, shop-floor detail, and edge-case compliance that matter once Phases 1 and 2 are bedded in.

Sales & CRM	Standalone Customer Master, Lead Register & Follow-ups, Quotation Status & Versioning
Cash Flow	Payment Reminders
Dispatch & Logistics	Transporter & Freight Tracking
Pricing & Costing	Price Revision History
Procurement	Import Purchase Tracking
Operations & Inventory	Work Orders / BOM Lock, Low-Stock Alerts
Job Work Management	Return & Quality Check
Shop Floor & Production	Daily Production Log, In-House Machine Maintenance, Raw Material Consumption, Tools & Tackles Register
Workforce & Payroll	Salary Advances / Loans
In-House Expenses	Petty Cash Register
Banking & Cheques	Bank Reconciliation
Assets & Statutory Compliance	Fixed Asset Register, TDS on Contractor Payments
Quality & Documentation	Drawing & Manual Repository, Test / Calibration Certificates
Reporting	Sales / Performance Reports

PART A — WHAT'S IN THE TOOL TODAY

Twelve modules, audited feature by feature.

01 AUTHENTICATION & ACCESS

FEATURE	STATUS	NOTE
Login / logout	Working	—
Register new user	Working	Every new account gets the same access — see Roles below
Forgot / reset password	Working	—
Edit own profile & photo	Working	—
Change own password	Working	—
Role-based permissions	Not built	One shared access level for everyone who logs in
Audit log	Not built	No record of who changed a price, quotation, or invoice

02 DASHBOARD

FEATURE	STATUS	NOTE
Sales / revenue overview	Not built	Page exists but shows the template's demo numbers, not yours
Top products, recent activity widgets	Not built	Same — decorative, not wired to your data

03 PRODUCT MASTER

FEATURE	STATUS	NOTE
Add / edit / list products	Working	—
Delete product	Working	—
Product categories	Not built	—
Stock level shown on the product itself	Not built	Inventory is a separate, disconnected page

04 MACHINE CONFIGURATION — per product

FEATURE	STATUS	NOTE
View software / laser cutting / focus head / power source config	Working	—
View motor / gear / rack / software list	Working	—
View cutting-way / CNC thickness parameters	Working	—
"Add" a new config entry (all ~7 forms)	Broken	Errors on submit — the record can save but the page that follows crashes

05 QUOTATION

FEATURE	STATUS	NOTE
Fiber laser quotation form	Working	Cutting machine, focus head, power source, cutting way, CNC specs, motor, gearbox, rack
Quotation list	Working	—
Quotation PDF	Working	—
CO2 laser quotation	Broken	Route is unreachable — shadowed by another route ahead of it
Status (draft / sent / won / lost)	Not built	—
Version history on edits	Not built	Editing a quote overwrites it
Send via WhatsApp / email	Not built	—

06 INVOICING

FEATURE	STATUS	NOTE
Create invoice with line items	Working	—
Invoice list	Working	—
Invoice details / print view	Working	—
GST split — CGST+SGST vs. IGST	Partial	Hardcoded to Gujarat — wrong split for every other state you sell into
Invoice numbering	Partial	Hardcoded placeholder text in the template, not a real sequence
e-Way bill number / date	Partial	Fields exist on the form; nothing generates an actual e-way bill
Credit / debit notes	Not built	—

07 PAYMENTS

FEATURE	STATUS	NOTE
Record a payment against an invoice	Working	—
Payment history	Working	—
Auto-calculate paid / remaining	Working	—
Milestone / advance payment structure	Not built	One invoice, one payment — no booking/pre-dispatch/post-install split
Receivables / aging report	Not built	No "who owes what, how overdue" view anywhere
Payment reminders	Not built	—

08 CUSTOMERS

FEATURE	STATUS	NOTE
Customer captured on invoice	Working	Billing + shipping detail per invoice
Customer list	Working	Labeled "Vendor" in the menu — it's actually your customers
Standalone customer master	Not built	Can't add or edit a customer without creating an invoice first
Lead / prospect tracking	Not built	A quotation appears from nowhere — no funnel before it

09 INVENTORY

FEATURE	STATUS	NOTE
Inventory list	Working	—
Add inventory entry	Working	—
Deduct quantity on use	Working	—
Low-stock alerts	Not built	—
Supplier master / purchase orders	Not built	—

10 REPORTS & COMPLIANCE

FEATURE	STATUS	NOTE
GSTR-1 export	Not built	—
Tally ledger export	Not built	Your CA is on Tally — nothing leaves this system in a format it reads
Sales / performance reports	Not built	—

11 DEALER / AGENT MANAGEMENT

FEATURE	STATUS	NOTE
Everything	Not built	No dealer or agent concept anywhere in the system

12 AMC & SERVICE

FEATURE	STATUS	NOTE
Everything	Not built	Nothing tracks a machine, its warranty, or its service history after it ships

13

SYSTEM & INTERFACE

FEATURE	STATUS	NOTE
Multi-language switcher	Working	8 languages — interface chrome, not your business content
Dark / light theme	Working	—
Right-to-left layout (Arabic)	Working	—

PART B — MODULE CATALOG

Every module that can be added, now with its concrete features listed — so ticking a box means agreeing to a scope, not a headline. Ordered by business flow: sell → collect → comply → ship → serve → cost → buy → build → people → money → assets → quality → see → automate → administer.

Rev E: every card below is now tagged with its phase, matching the Build Order above. 8 modules were promoted from Phase 3 to Phase 2 in this pass — e-way bill, GSTR-1, Tally export, credit/debit notes, WhatsApp send, dealer commission, the bank register, and post-dated cheque tracking — each a near-term compliance or cash-flow need, not a polish item.

ACCESS & TRUST

Roles & Permissions

PHASE 1

Each of the 7+ people sees only what their job needs.

- Predefined roles: Owner, Sales, Accounts, Stores, Service, Dealer
- Per-module permission matrix — view / create / edit / delete
- Cost & margin fields hidden from everyone except Owner
- Admin screen to add users, assign roles, reset passwords — no developer needed
- Deactivate a user without losing their history

Audit Log

PHASE 1

Who changed what, and when.

- Every create / edit / delete stamped with user and time
- Before-and-after values on price and amount changes
- Filter by user, module, or date range
- Exportable when a dispute needs settling

**Standalone Customer Master**

PHASE 3

A customer record that exists before and beyond any one invoice.

- Add / edit a customer without creating an invoice first
- Multiple shipping addresses; GSTIN per state where they're registered
- One-page history — quotations, orders, machines owned, payments
- Duplicate detection by phone number and GSTIN

**Lead Register & Follow-ups**

PHASE 3

The funnel before the quotation.

- Source tracking — IndiaMART, exhibition, reference, walk-in
- Next follow-up date, surfaced as a daily task list per salesperson
- Call / WhatsApp / visit log on each lead
- Won or lost, with the reason — so you learn why deals die

**Quotation Status & Versioning**

PHASE 3

Negotiation without overwriting history.

- Status flow: draft → sent → negotiating → won / lost
- Every revision preserved — Rev 1, Rev 2, Rev 3 all recallable
- Side-by-side comparison of two revisions
- Validity period with automatic expiry

**WhatsApp / Email Send**

PHASE 2

Documents go out the way Indian machine sales actually happen.

- One-tap PDF send from a quotation or invoice
- Standard message templates, editable before sending
- Send log kept on the record itself
- Delivery status where the channel reports it

**Dealer / Agent + Commission**

PHASE 2

Your mixed direct-plus-dealer channel, finally in the system.

- Dealer master — territory, contact, commission rate — separate from customers
- Commission auto-computed on every booking they bring
- Payable / paid commission ledger per dealer
- Dealer-wise sales report — who's actually selling for you

**Receivables / Aging Dashboard**

PHASE 1

Who owes what, at a glance.

- Outstanding per customer, aged 0–30 / 31–60 / 61–90 / 90+ days
- Drill down from a customer to their unpaid invoices
- Total outstanding on the owner's dashboard, always current
- Statement of account — printable, WhatsApp-able

**Milestone / Advance Payments**

PHASE 2

One machine order, several payments — the way it really works.

- Payment schedule per order: booking / pre-dispatch / post-installation
- Advance receipts recorded with correct GST-on-advance treatment
- Advances auto-adjusted against the final invoice
- Pending-milestone alerts before dispatch dates

**Payment Reminders**

PHASE 3

Chasing money without the daily phone list.

- Automatic WhatsApp / SMS on due date and on overdue
- Escalating templates — gentle at 7 days, firmer at 15
- Owner alerted on repeat defaulters
- Full reminder history per customer

**Pan-India GST Engine**

PHASE 1

Replaces the Gujarat-only hardcoded check.

- CGST+SGST vs IGST decided by the customer's state code, per invoice
- GSTIN format validation, state-code cross-checked against address
- HSN/SAC master with per-item tax rates
- Handles rate changes without touching code

**FY Document Numbering**

PHASE 1

Real sequences, replacing the hardcoded invoice number.

- Auto sequence per financial year — e.g. OMT/2026-27/0041
- Separate series for invoice, quotation, challan, credit note
- Configurable prefix and format per document type
- No gaps or duplicates — enforced by the system, resets 1 April

**e-Way Bill Generation**

PHASE 2

Every machine ships by truck — this stops being a manual portal job.

- Generated from invoice data — no re-typing on the portal
- Vehicle (Part-B) updates and validity tracking
- Threshold alert when a dispatch legally needs one
- Cancellation within the allowed window

**GSTR-1 Export**

PHASE 2

What your CA asks for every month, ready-made.

- B2B invoice-wise summary
- HSN-wise summary sheet
- Credit / debit note section included
- Excel / JSON your CA can file from directly

**Credit / Debit Notes**

PHASE 2

Price adjustments with a paper trail.

- Always linked to the original invoice
- GST reversal computed automatically
- Reflected in the customer's receivable balance
- Print format consistent with your invoice

**Tally Ledger Export**

PHASE 2

This system records; your CA's Tally stays the book of account.

- Sales, receipts, and expense vouchers as Tally-importable XML
- Ledger auto-mapping — customer → sundry debtor, etc.
- Export by date range
- Safe to re-export — no duplicate vouchers

Packing & Dispatch Note

PHASE 2

What leaves the factory, on paper, before the truck moves.

- Packing list per machine — accessories and spares included, so nothing is "forgotten"
- Dispatch note with transporter, vehicle number, LR number
- e-Way bill reference linked
- Customer auto-notified the moment it ships

Transporter & Freight Tracking

PHASE 3

Freight is a real cost and a real risk.

- Transporter master with negotiated rates
- LR tracking through to delivery confirmation
- Freight cost recorded against the order
- Damage-in-transit claims log

Installation Scheduling & Report

PHASE 2

The visit that turns a shipment into a running machine.

- Installation visit scheduled with engineer assignment
- On-site report — commissioning readings, operator training done
- Customer sign-off captured (photo / OTP)
- Warranty clock starts on the serial record from this date

Machine Serial Number Master

PHASE 2

Every machine you've ever built, findable.

- Serial generated at dispatch with the config locked as a snapshot
- Customer, install date, warranty end — one record
- Full service history as a timeline
- QR sticker on the machine body opens its history

AMC Contract Tracking

PHASE 2

Recurring revenue you already earn, finally tracked.

- Contract per machine — start, end, value, visits included
- Renewal alerts 30 and 15 days before expiry
- Visit consumption tracked against the contract
- AMC revenue report — what this side of the business is worth

Service Ticket System

PHASE 2

Complaint to closure, logged against the machine.

- Flow: complaint → assign engineer → resolve → close
- Parts consumed on a ticket deduct from stock
- Under-warranty vs chargeable flag per ticket
- Turnaround-time report per engineer

Component Rate Master

PHASE 2

What every part costs, with history — laser source prices move.

- Rate per component with effective-from date
- Full rate history, not just the latest number
- Supplier-wise rate comparison on the same part

Machine Costing Sheet

PHASE 2

The owner's most important number: what a machine really costs to build.

- BOM cost rollup per model and configuration
- Overhead % and target margin → suggested selling price
- Actual cost vs quoted, compared after the build
- Visible to Owner role only

Price Revision History

PHASE 3

Prices change; records shouldn't rewrite themselves.

- Every selling-price change logged with reason and date
- Old quotations keep the price they were made at
- Who changed the price — ties into the audit log

PROCUREMENT

Supplier Master

PHASE 2

Who you buy from — separate from customers and job workers.

- Contact, GSTIN, bank details, agreed payment terms
- Item-wise rate history per supplier
- Outstanding payable per supplier
- Supplier notes — quality, delays, reliability

PO → Receipt → Bill Match

PHASE 2

Three numbers that should agree, and often don't.

- Purchase order with expected delivery date
- Goods receipt against the PO — updates stock automatically
- Supplier bill matched to receipt; mismatches flagged
- Pending / overdue PO report

Import Purchase Tracking

PHASE 3

If your laser sources come from abroad, the paperwork is different.

- Foreign-currency purchase orders
- Customs duty and IGST-on-import captured per shipment
- Landed cost rolled into the component's real rate
- Shipment milestone tracking — ordered, shipped, customs, received

OPERATIONS & INVENTORY

Work Orders / BOM Lock

PHASE 3

From confirmed order to buildable job.

- Order confirmation creates a work order with the BOM locked from the quoted config
- Stage status — frame / assembly / wiring / testing / QC / ready
- Target vs actual completion date
- Material shortage list per work order

Low-Stock Alerts

PHASE 3

A nudge before a part runs out mid-build.

- Reorder level set per item
- Dashboard flag plus WhatsApp alert to stores
- Suggested reorder quantity from actual consumption
- Dead-stock report — no movement in 90 days

Job Work Orders (Outgoing)

PHASE 2

Material out for a process, expected back.

- What material, which process, which job worker
- Expected return date with an overdue list
- Agreed rate per job recorded up front
- Linked to the work order / machine it belongs to

Job Work Delivery Challan

PHASE 2

GST moves job-work material on a challan, not a tax invoice.

- GST-compliant job-work challan, generated not improvised
- Material description pulled from stock records
- Challan register showing pending returns
- Return-deadline tracking per the ITC-04 rules

Job Worker Master

PHASE 2

Your sub-contractors, on record.

- Contact, GSTIN if registered, process specialization
- Rate card per process
- Material currently lying at each job worker
- Payment tracking, linked to TDS where it applies

Return & Quality Check

PHASE 3

Closes the loop the challan opened.

- Received quantity vs sent — scrap and loss visible
- Accept / reject entry on return
- Rejection back-charge note to the job worker
- Challan closed only when material is accounted for

Daily Production Log

PHASE 3

What the floor did today, on record.

- Each machine under build and its stage, day by day
- Workers assigned to each job that day
- Delay reasons captured when they happen
- Progress photos attached

In-House Machine Maintenance

PHASE 3

The lathes and welders you build with, not the machines you sell.

- Service schedule per piece of shop equipment
- Breakdown log with downtime hours
- Spares used per repair
- Running maintenance cost per equipment

Raw Material Consumption

PHASE 3

Steel and consumables drawn against a specific job.

- Material issued against a specific work order
- Actual usage vs BOM estimate
- Wastage and scrap recorded
- Feeds the real costing sheet, not a guess

Tools & Tackles Register

PHASE 3

The things that go missing without a record.

- Issue / return per worker
- Missing and damaged log
- Calibration due dates for measuring tools

Worker / Employee Master

PHASE 1

The record everything else in this category builds on.

- Personal, contact, and emergency details
- Role, department, joining date, ID documents
- Pay structure: monthly salary, daily wage, or per-piece
- Deactivate on exit — history stays

Daily Attendance

PHASE 1

The input payroll is computed from.

- Present / absent / half-day / leave, per worker per day
- Overtime hours entry
- Monthly register view per worker
- Fast bulk entry — the whole floor marked in a minute

Salary & Payroll Processing

PHASE 2

Computed from attendance, not typed from memory.

- Monthly sheet: attendance x pay structure, per worker
- Overtime, deductions, and advance adjustments in the same sheet
- Month locked after payout — no silent edits
- Cash / bank payout marking per worker

Salary Slips

PHASE 2

A slip a worker can be handed.

- PDF slip per worker per month
- Earnings and deductions broken down
- WhatsApp send to the worker
- Year-to-date totals

Salary Advances / Loans

PHASE 3

Advances happen — the notebook shouldn't be the ledger.

- Advance entry with reason and date
- Automatic instalment deduction from monthly salary
- Outstanding balance per worker
- Visible in the worker's profile history

Daily Expense Entry

PHASE 1

Logged the day it happens, not reconstructed at month-end.

- Date, category, amount, paid-to, mode (cash / UPI / bank)
- Bill photo attached to the entry
- Entered-by stamp — ties into roles and audit
- Month view with running total

Expense Categories & Reports

PHASE 2

Where the money actually goes each month.

- Category master — power, diesel, rent, freight, contractor...
- Month-on-month comparison per category
- Category totals in the shape your CA's P&L needs
- Feeds the Tally export

Petty Cash Register

PHASE 3

The small cash that leaks without a book.

- Opening / closing balance per day
- Cash in / out entries against expenses
- Custodian-wise — who holds the box
- Reconciliation against expense entries

Bank & UPI Register

PHASE 2

Every rupee in or out, tagged to an account.

- Company account list — bank, UPI, cash
- Every receipt and payment tagged to an account
- Running balance view per account

Post-Dated Cheque Tracking

PHASE 2

PDCs are how machine milestones actually get paid.

- PDC received, with due date, against an order milestone
- Deposit reminder when the date arrives
- Bounce record with re-presentation tracking
- PDC-in-hand total visible alongside receivables

Bank Reconciliation

PHASE 3

The statement and the system, agreeing.

- Import a bank statement (CSV / Excel)
- Auto-match against recorded receipts and payments
- Unmatched-entry list to resolve

Fixed Asset Register

PHASE 3

Your own machinery, vehicles, and equipment on the books.

- Asset list with purchase value and date
- Depreciation schedule your CA can use
- Insurance and service renewal dates
- Disposal / scrap record

Statutory Compliance Calendar

PHASE 2

Deadlines found before they lapse, not after.

- Master list — PF/ESI, professional tax, factory license, pollution control, GST dates
- Due-date alerts to the owner
- Done / pending with proof attached
- Year-at-a-glance view

TDS on Contractor Payments

PHASE 3

Deducted at source, reconciled at filing.

- Automatic TDS on job-worker / contractor payments over threshold
- Section-wise summary (194C and friends)
- Quarterly totals ready for return filing
- Deduction certificate record

Pre-Dispatch QC Checklist

PHASE 2

The record you point to in a warranty dispute.

- Checklist template per machine model
- Pass / fail per point, inspector signed
- Photos and video attached
- Dispatch blocked until QC passes

Drawing & Manual Repository

PHASE 3

Not on someone's laptop.

- Files per machine model, version-controlled
- Linked to every serial record of that model
- Role-based access — service sees manuals, not costing

Test / Calibration Certificates

PHASE 3

Attached at dispatch, findable forever.

- Certificate upload against serial or invoice at dispatch
- Auto-attached when the invoice is sent
- Expiry tracking where certificates renew

REPORTING

Owner Dashboard, Real Numbers

PHASE 1

The morning screen — yours, not the template's demo.

- Today: collections in, dispatches out, new leads
- This month: sales vs last month, total outstanding
- Machines in production and in the service queue
- AMC renewals due this month

Sales / Performance Reports

PHASE 3

The questions you ask at month-end, answered in one click.

- By customer, product, state, and month
- Quotation conversion rate
- Margin per machine — once the costing sheet exists
- Everything exports to Excel

AUTOMATION

Notification Engine

PHASE 2

One system for every message the business sends.

- Single template store for WhatsApp / SMS / email
- Triggers: payment received, AMC due, ticket update, follow-up due, dispatch done
- Per-customer opt-out respected
- Send log with delivery status

SYSTEM ADMINISTRATION

Company Profile & Branding

PHASE 1

Your identity on every document, edited in one place.

- GSTIN, address, logo, contact — printed on all documents from one setting
- Multiple bank accounts, chosen per invoice
- Terms & Conditions master — a T&C table already exists in the code, unused
- Document footer / signature block settings

Backup & Data Safety

PHASE 1

The whole business is in this database — treat it that way.

- Automatic daily database backup
- Owner can download a backup copy anytime
- Documented restore procedure, tested once
- Backup failure alert — silence is not success

USING THIS DOCUMENT

The Build Order above is the recommended sequence; the catalog below it is the full evidence — 60 modules, 19 categories, each with its features

spelled out. The checkboxes are yours to mark up on screen while you read; nothing saves automatically. Confirm the Phase 1 list (or move things between phases) and that becomes the working scope for the first release.
